

STATdat.

Posledná aktualizácia:16.07.2020

STATdat database contains reports (tables) of economic and socio-economic development indicators. The classification system of reports is based on maintaining the structure of domains and fields similarly as in the web Portal. Data from various statistical fields are presented in the form of reports in monthly, quarterly or yearly time series. The end of each report name contains an eight-digit code as its unique identifier. Reports of the Indicators of Economic Development of the SR contain data tables, year selection filter and notes. Reports of pre-defined tables contain a button for entering the DATAcube database where a user can work with a multidimensional table and carry out its own selections. Report outputs can be exported into PDF, XML, XLS, CSV formats and the multidimensional tables into PDF and XLS formats. Reports of Indicators of Economic Development of the SR are released in accordance with the Calendar of First Data Release.
